

MUSICMATE

A social media app for music lovers.

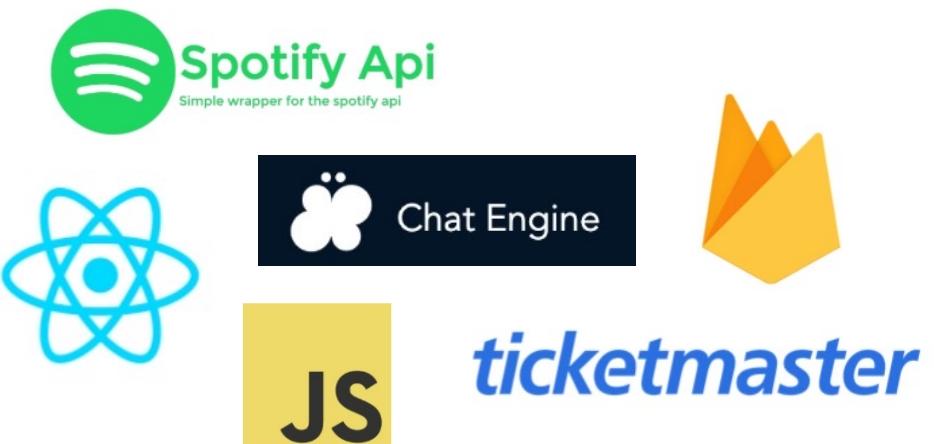

What is MusicMate?

This is MusicMate, a social media app for music lovers. Users can view their own listening statistics, how their music taste compares to their friends, and find concert buddies.

Technologies used

- Spotify API
- React
- Firebase
- Ticketmaster API
- Chat Engine

Our Team

Dylan McGoldrick, Will Ruskin, Erika Proctor, and Izabela Aranda-Dooley

Motivation

Currently, there is no social media component alongside Spotify. We wanted a way to easily connect with people through music. MusicMate addresses these issues.

How does similarity scoring work?

Once a user clicks on a specific friend, they can see their shared top artists and genres, as well as a similarity score. If the artists ranks higher for both users, they are displayed on the user's similarity score page. 50% of the similarity score is comprised of the number of shared artists and genres, and the other 50% is comprised of the weight of each user's top artists and genres. Weight is determined by how high the artist or genre is ranked for both users.
